

Brand New

FRAME'S ANATOMY. Philippe Starck is launching a new generation of **biosun** sunglasses for men. Focused on comfort and discrete style, the collection features biolink—a micro articulation inspired by the human clavicle that maximizes flexibility on every Starck biosun frame. Developed in collaboration with Vuarnet engineers, each frame hugs more than it clasps, and features lenses with a multilayer anti-reflective treatment on the inside and a hydrophobic, anti-dirt coating on the outside. For each style, the consumer may choose between mineral and organic lenses (nylon and polycarbonate). The nine styles in the collection are distributed in three different families: acetate, metal, and injected grilamid. **GET IT NOW: ALAIN MIKLI LTD., 800.829.8032, MIKLI.COM**

BEAT THE HEAT. Stay comfortable in ultra lightweight frames from **Reptile Sun**. The retro-inspired, sporty **Basilisk** frames feature polynium polarized lenses to reduce glare and enhance performance. In two color combinations, black on black/red and chocolate on chocolate/lime, even the most sizzling of summer days will feel cool. **GET IT NOW: REPTILE POLARIZED SUNGLASSES, 800.625.1880, REPTILESUN.COM**
